

## New Uzbekistan: Innovative Approach to Education

**Boyzaqova Umida Ashirali qizi**

Base doctorate, Namangan State University, Uzbekistan, Namangan

**ANNOTATION:** In the globalizing world, peace and stability are the most valuable for developing countries. The policy pursued by the president is a strategy of development ensuring an atmosphere of pre-emptive diplomacy, harmony of the nation and religious tolerance in any situation.

**KEYWORD:** innovative approach, education, quality, development, innovative methods, modern education system.

In this regard, the first issue in life is a matter of school, Abdurauf Fitrat calls for an innovative approach to education. The development of society is determined by the extent to which the educational system is developed. Article 41 of the Constitution of the Republic of Uzbekistan: "everyone has the right to receive knowledge. Free general education is guaranteed by the state. School work is under state control" the importance of Education has been determined.

At the same time, school work is a nationwide issue that requires the participation and support of our people. In fact, reforms in the educational system will further enhance the spiritual and social potential of society, as well as create a basis for the development of all spheres. The achievement of the intended goal and result in education is considered to depend on the continuous improvement of educational thinking.

President of the Republic of Uzbekistan Shavkat Mirziyoyev on the issue of reform in education of our country: "another main task of the education sector is to teach the new generation, the basis of science and its specialization, which is necessary for the present day, without doubt," - asserts that it is more important than ever before [1, P. 230.].

The main goal of the reforms carried out in today's educational sphere is to educate a person who is comprehensively developed, spiritually mature, has an independent worldview, is able to think creatively, has an active civil position. The task of education is to take care of the needs of the consumer of educational services in the process of continuous education, as well as the student who is a participant, to receive knowledge, to formulate and develop his abilities, as well as to teach the consumer of education (pupil) to think independently in the conditions of today's complex educational environment, that is, every parent, teacher and coach must first see the person in the image of each child. Due to this simple requirement, we must accept that adult education should be the main goal and function of the educational sphere – to reach the perfect people who have the ability to think independently and broadly, to live consciously " [2, P. 14.].

The increasing popularity of social networks among young people today, the fact that the internet is the main source of information and the main means of communication, the departure from online

games and the popularization of the online store among young people leads to the fact that the need for education of readers and young people is slowing down. Such a threat increases the educational and educational work of schoolchildren and parents, come to the task of creating the immune system.

In order to bring the need for the education of the student to the level of physiological need, to increase the level of independent performance, first of all, it is necessary to be interested in educational science. In order to arouse interest in the student, to educate a person who aspires to create innovation, education itself should be rich in innovation and widely used pedagogical innovations, as well as an innovative approach to education in school work.

In this regard, comments on the concepts of pedagogical technology and innovation;

To begin with, let's clarify the concept of "technology". "Technology is a complex of ways, methods used in a work, skill, art" [4,233-P].

"Pedagogical technology is a collection of educational methods, methods, ways, as well as educational tools, it is a set of organizational and methodological tools of the pedagogical process. Hence, pedagogical theology is the process by which the student independently learns, learns and assimilates knowledge under the guidance of the teacher" [5, P. 231].

"Innovation (ing. Innovation-introduced innovation, invention) - the process of creating a subject, structure, value and methods of activity (technologies) that did not exist before, expressing the emerging innovations in characters, images and symbols, social mastering and dissemination in all spheres of society and human life. Innovative activity expresses the creative side of renewal, on the ground of any innovation lies the creative activity of man " [6, P. 138.]. Proceeding from the above definition, pedagogical innovations in the school education system also express the expected result in the educational process, as well as the introduction of innovations, changes in the activities of the teacher and the student in order to achieve high efficiency.

Proposal and description:

1. The use of folk songs and folk songs in the recovery of the socio-spiritual environment.
2. Bringing smart theology to the study rooms.

### Conclusion:

In order to achieve the intended goal in an innovative approach to education and achieve a high result in the system of school education, it is necessary to introduce adequate conditions, innovative classrooms, even for a consumer student. To achieve a high result, it is necessary to be of high quality.

"School is not just an educational institution, it is necessary for all of us to become a cradle of high spirituality, a haven that teaches our children from childhood to the profession " [3, P. 227.].
