

High-Spirited Generation - The Creators of the Third Renaissance

Imamova Ozoda Shuhrat qizi

Entrepreneurship and pedagogy named after Denov Institute, Faculty of Social Sciences and Humanities, Philology and language teaching: Uzbek language

ABSTRACT: In his congratulatory speech, President Shavkat Mirziyoyev stressed that "the goal of our development should be the third renaissance." Our society must have a deep understanding. In all areas, our work in the field, our plans and future programs, education and personnel policy, investment policy - all must be aimed at creating conditions and environment for it. We must be the builders of the renaissance.

KEYWORD: Renaissance, development, science, knowledge, enlightenment, youth, growth, economy, scientists, development.

High-spirited generation can carry out the third renaissance process. In order to carry out the third renaissance process, we must work together, our main strength in this direction is the youth, said President Shavkat Mirziyoyev. We must first justify this belief. We must first understand the meaning of the word renaissance. That is, the word "renaissance" literally means "rebirth" in French. The process of renaissance is to reform, develop, and develop all areas of economics, politics, culture, art, science, education, and perhaps society. The term was used in Europe after the middle Ages to refer to the period of development in the 15th-16th centuries. The term Renaissance is also called the period of awakening in Uzbek. In particular, it was proved by the famous Australian orientalist Adam Mes's work "Muslim Renaissance" in 1909. Before independence, our country saw many invaders. After that, the First President Islam Karimov developed the "Uzbek model" for the development of our country. If we consider our country Uzbekistan as one house, then our First President Islam Karimov laid the foundation of this house. This work was continued by our 2nd President Shavkat Mirziyoyev. In other words, he developed the "Strategy of Action", which created many opportunities and conveniences for our people. Friendly relations have been established. Our country has begun to develop further. This time, we must act quickly, not step by step, to implement the "Strategy of Action" ("Harakatlarstrategiyasi"). We need to act on the idea that we can join the ranks of states. The Renaissance is the basis of development. The first is the 9th-12th centuries; the second is the last quarter of the 14th century, the first quarter of the 16th century. great geniuses such as Ghari, Mahmud Zamakhshari, great hadith scholars — Bukhari, Termezi, mutakallims — Moturidi and Abul Muin, Nasafi and other famous secular and religious scholars illuminated the world.

In the second renaissance, Ulugbek, Giyosiddin, Jamshid Kashi, Qazizoda Rumi, Ali Kushchi, Lutfi, Jami, Navoi, Behzod and other great scholars, as well as great architects, composers, painters and historians came out and amazed the world. We still live in the name of our great ancestors. Why don't the Navoi people come out of us? Why can't we write? Why do we rest in the shade? Do you know

why Alisher Navoi's works are so popular? Before writing a work, he prayed to Allah, "O Allah, put such a work in my heart so that everyone will like it. Not only that, but they also worked tirelessly. They always read to increase their knowledge. That is why the works of Hazrat Navoi glorify more divine love. If we try to be human like Navoi, our country will reach higher heights than we think. Science is the main basis for our development. If the younger generation is educated, if they are knowledgeable, they will make new discoveries, contribute to the development of technology. They will also achieve new heights in sports. We need to be thirsty for science.

Here is the phrase of American engineer and entrepreneur Steven Jobs, founder and CEO of Apple Inc., "Be hungry, be stupid." "Be hungry" means that one is always hungry for new things, and "Be stupid" means that one should always create new knowledge as if one did not know anything. We, the youth, would be more educated if we followed this phrase. The third, as the founders of the essay, the youth, we must justify this belief and reach the highest heights in science and enlightenment. Our country is becoming one of the leading countries in Central Asia. To be active on all fronts for the prosperity of our country. In particular, in our economy, politics, education, culture, enlightenment, sports and so on. Extensive work is being done. Technology is also accelerating. When the Uzbeks and Turks co-authored the series "Mendirmen Jaloliddin", they saw our ancient history, the mirror world. It was proved that we have a glorious history.

In short, as the builder of the third renaissance, we must do the following for the further development of our country.

1. Quality control of education;
2. Creating opportunities for Uzbek scientists;
3. Reconsideration of the payment system and so on.

At present, special attention is paid to the quality of education, but one of the things to be taken into account is that uneducated personnel still remain among us. This element reduces the quality of education. For example, when students are being monitored in class, they behave carelessly, and when they do not know that they are using cribs, they ignore the lessons. If this situation is repeated several times, the students will not study the subject at all. Because the teacher taught it. I would like to mention some of the teachers in the field. Our quality of education will be maximized only if educated people work in this field. It is a teaching profession. Because a teacher teaches both a doctor and a judge and even heads of state. knowledgeable, experienced enthusiastic educators should work.

It is necessary to create opportunities for Uzbek scientists. At present, opportunities and conditions are being created. But their ideology has not changed. I mean, most Uzbek scientists work in the United States, because there are better conditions there than here. The United States is one of the world's leading nations. If the country does not have foreign scientists, the economy may collapse. Therefore, this country has opened a wide range of opportunities for scientists. If we use this method, we will develop even more. Why should scientists work abroad? If necessary, foreign scientists should come and work in our native land. Then ideas would be exchanged and new ideas would be born. The system of remuneration needs to be reformed. Everyone should be paid according to what they have done, that is, they should be satisfied with what they have received for what they have done. Only then will they work diligently.

This work is being done gradually. Let us, the youth, make a worthy contribution to this. Let us always be passionate about our country.
